

Variable Grip for Alpa 12 STC

Alpa 12 STC provides the features for shifting and stitching within a certain range. For better control of the camera when rotated for shifting Swiss woodcraft Atelier Montalta together with photographer Markus Zuber developed a new grip – the Variable Grip – which can be attached with a D-ring screw manually without using any tool.

Individual design with exquisite Swiss woods

The Variable Grip is designed using exquisite wood species from Swiss forests. Every grip is therefore unique. The grip is ergonomically designed to fit in your hand for both the horizontal or vertical position of the camera.

Together with the grip a Arca Swiss-compatible tripod plate with a D-ring screw can be ordered on request.
